

FACING DROUGHT RISKS ON YOUR RANCH?

4 ways to mitigate risk caused by drought

1: Increase Digestion Capacity with Nutrizorb®

With a multi-component digestion pack Riomax® hyperactivates the bugs and bacteria in the rumen so that they do a better job of breaking down the forages and increasing nutrient extraction.

2: Better Manage the Assets you Have

Your land base is your greatest asset. The hay you put up or the hay you buy is a big part of your expense through times of drought. Use Riomax® to optimize the assets you have.

3: Use the Riomax® program as a Grazing Management Tool

Use the tubs for strategic grazing and pulling cattle into underutilized parts of the pasture. This drives efficiency.

4: Avoid Over-Consumption Costs

In times of drought or reduced quality of forages you many times see drastic overconsumption with other tub products on the market. You don't need to be a victim of this kind of risk. Riomax® offers the COSTGUARD® consumption guarantee.
