

IS THAT UNBORN CALF'S MINERAL BUCKET FULL?

Riomax's Esqort® contains 100% protected key trace minerals, which have the very highest chance of making it to the calf's 'mineral bucket'. It's essential for calves to be born with a full mineral bucket, because once born, they get very few vitamins and minerals through mama's milk. A sufficient mineral reserve allows calves to stay healthy and start their life off right.
