

HOW DOES RIOMAX[®] AFFECT BULL FERTILITY?

KIM SIEBERT - HENDERSON, NE

- ✓ Went from a consistent 4-5 bulls that wouldn't pass their semen test down to 1. Bulls reaching maturity at younger ages.

GENOA LIVESTOCK - MINDEN, NV

- ✓ Bulls tested 70/70. Avg 160 straws. Generally, the first straws won't freeze but this time majority did. Last year was way more cold and wet than normal and only had a 1% death loss.

605 SIRES - MARION, SD

- ✓ 90 days after the highest temperature in the summer and the bull production was still good.

TOM SCHNABEL - EUREKA, SD

- ✓ Scrotal measurement averaged 2-3 cm bigger and better semen checking with Riomax.

CHAD SEARS - NEWCASTLE, WY

- ✓ Spring of 2015, semen tested the bulls and the vet said "What have you been feeding these bulls? Their semen is fantastic!"

SCOTT BEAMAN - LA SALLE, CO

- ✓ Semen tested 48 yearling bulls, only 1 didn't pass and it was an issue not related to nutrition. The vet said it was the most consistent set he has done!

JEFF VASKEY - RAYNESFORD, MT

- ✓ 20 bulls tested before turnout and 100% of them tested perfectly. The vet told them he couldn't even believe it as he's never seen bulls test so well.
