

# HOW DOES RIOMAX<sup>®</sup> AFFECT AI FERTILITY?

## FIELDING, UT

- ✓ Synchronized 130 head for AI, ordered 100 straws and figured that would be enough. Usually we'd probably only breed about 65-75% of them so I thought 100 straws would be plenty. Ended up having to go pick up more straws because somehow we were able to breed all but 9 of them. 93% on AI'd cows only 5 months after starting on Riomax PG360.

## CASCADE, MT

- ✓ 62% bred all AI. No bulls. Best we've done at the ranch.

## LA SALLE, CO

- ✓ 80% min conception with AI'ing (running 80-85%) Only use 1 shot of Lutylase and only put CIDRs in the cows that don't stand the first time. This saves me 3 trips in the shoot, hours in labor, and \$ on the bottom line.

## BUFFALO, WY

- ✓ Seen conception rates improve so I know it's working. Used to get high 80s and now mid 90s. Had a group of heifers with 93% but 80% were bred on AI and that is really good. Had a group that was 60% on embryos and industry average is somewhere around 42% or so. Have other feed companies approach us all the time and I just tell them, "If you can get the numbers that we're getting on Rio we could take a look..." I really don't think we will ever change away from Rio because we know it actually works.

## HUDSON, SD

- ✓ We were AI-ing and we got 30 for 30 and then 38 for 41!!!  
You guys have an amazing product!
