

## *Frequently Asked Questions*

### **HOW MUCH DOES RHYZOGREEN COST?**

Approximately \$22 USD per acre, but this varies with quantity discounts and passes required.

### **WHAT ARE THE APPLICATION INSTRUCTIONS?**

Blend recommended amounts with 5-25 gallons of water per acre for foliar application or a minimum of 2 gallons of water per acre for in-furrow application. For best results, foliar applications should be made in the morning hours when the air is cool.

### **AT WHAT TEMPERATURES SHOULD RHYZOGREEN BE APPLIED WHEN USING FOLIAR APPLICATION?**

It is not recommended to apply Rhyzogreen in temperatures colder than 40°F or hotter than 90°F. A light frost of 1 or 2 degrees below freezing will not normally harm most plants and spraying can be resumed later in the day as long as daytime high is forecasted to reach at least 45°F. Ideal temperatures to apply Rhyzogreen are between 50°F and 80°F.

### **HOW MUCH RHYZOGREEN DO I APPLY PER ACRE?**

Typically 1/5 of a gallon per acre (25.6 oz). An easy way to look at it is 1 gallon for every 5 acres. Consult the product label or your Rhyzogreen rep for more specific details.

### **CAN I MIX RHYZOGREEN WITH OTHER PRODUCTS?**

Rhyzogreen can be mixed with additional products like fertilizer, and trials have shown that Rhyzogreen can improve performance of other products. However, always jar test for compatibility before first use.

### **DOES RHYZOGREEN NEED TO BE KEPT FROM FREEZING?**

Yes, Rhyzogreen should be stored in temperatures above freezing.

### **DOES RHYZOGREEN INCREASE THE BRIX OF HAY?**

Rhyzogreen has been proven in field trials to increase alfalfa Brix (sugars) by at least 4%. That means the plants have increased proteins, sugars, organic acids, amino acids, minerals, lipids, and pectins.

### **IS IT SAFE TO APPLY FORAGE THAT IS ACTIVELY BEING GRAZED?**

Yes, it is safe to apply Rhyzogreen on pastures/forages even when they are being grazed.

**EFFECTIVE FOR PASTURE IMPROVEMENT, HAY MEADOWS & CROPLAND!**
