

# LIVER BIOPSY MINERAL TRIAL

ON OUR QUEST TO DETERMINE EXACTLY HOW MUCH AND HOW FAST RIOMAX IMPACTS COPPER LEVELS IN A COW, A LIVER BIOPSY WAS DONE ON 26 BRED COWS WHO HAD NEVER BEEN ON RIOMAX BEFORE. THE RESULTS CAME BACK SHOWING THAT THEIR COPPER LEVELS WERE AT AN AVERAGE OF **146 PARTS PER MILLION**.

RIOMAX® PG360™ TUBS WERE THEN INTRODUCED TO THE COWS. 14 DAYS LATER, THE COWS WERE BIOPSIED AGAIN. THEIR COPPER LEVELS HAD INCREASED TO AN AVERAGE OF **200 PARTS PER MILLION**, WHICH IS A 37% INCREASE FROM PREVIOUSLY.

A FINAL LIVER BIOPSY WAS PERFORMED ON THE COWS 42 DAYS AFTER STARTING ON THE RIOMAX® TUBS. THEIR AVERAGE COPPER LEVEL WAS AT **332 PARTS PER MILLION**, A 128% INCREASE FROM THEIR STARTING LEVEL!
