

THE MANURE STUDY

Performed by: Rio Nutrition LiveLab team

Subject of the study: 7 first calf heifers & their manure

Goal of the study: To measure the difference in the manure leftovers manure using Riomax® tubs versus control.

We conducted 3 studies to uncover exactly how much Riomax® is improving nutrient extraction of forage and hay, versus how much is going out as waste. It is important to note that the heifers were on a diet of grass hay for the duration of the trial. Both groups were offered salt blocks.

MANURE SCREENINGS

CONTROL

MANURE SCREENINGS

THAT'S AN AVERAGE OF 51% DECREASE IN WEIGHT!

That means that 51% MORE forage stayed in the cow and was put to good use, instead of ending up in the manure.
